

Universal Snare Drum Carrier

The DRUMBUDDY is a snare drum carrier and harness that enables the player to wear and position a "Concert" or "Drum set" snare drum in the modern marching style.

CONSTRUCTION: DRUMBUDDY consists of a chest plate and drum tray made of lightweight, high impact plastic attached to the player by a polypropylene harness, similar to the new saxophone straps that go around the chest. The diameter of DRUMBUDDY (17") allows all modern snares (which range from 13" to 15" in diameter) to fit with extra room for the drum's hardware. The DRUMBUDDY requires no special tools for assembly or adjustment. Installing the drum is as easy as placing it on a table, and the harness is simple to put on and adjust. Led by a passion for quality, the development of the DRUMBUDDY went through 10 prototypes and lasted over two years. This long process of combining the right design with the right materials assures that DRUMBUDDY is an effective, dependable product. DRUMBUDDY is 100% manufactured in the USA.

ORIGIN: Eric Schedin, a New England public school band director of 18 years, had watched as hundreds of drummers joined middle school programs, only to quit before high school. One obstacle he witnessed was the lack of available marching percussion equipment at the middle school level. This was usually due to budget restraints. Modern marching snare setups need a matching carrier and the combined cost is usually \$300 or more. The universal design of the DRUMBUDDY means that schools do not have to purchase marching drums, since each student already owns or rents a snare drum. And, on average, the DRUMBUDDY with a snare drum weighs three to five pounds less than a modern marching snare drum with harness.

Price: \$94.95 plus shipping and handling
